PROFESSIONAL SUMMARY

Full-stack software engineer and production operations leader with a track record of designing, building, and deploying custom application systems that solve real-world operational problems. Experienced in building automation tools from scratch, implementing validation and communication logic across complex workflows, and managing the full software project lifecycle; From requirements gathering and scoping to deployment and customer support. Effective at translating operational pain points into clean, maintainable software. Comfortable working across multiple platforms, languages, and environments, and experienced managing stakeholder relationships in demanding production settings.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL; Java, C++, .Net (foundational knowledge, actively refreshing)

Frameworks & Platforms: React, Node.js, Next.js;

Databases: PostgreSQL, SQL query design, schema architecture

Systems & Tools: AWS, REST APIs, Git, Vercel;

PROFESSIONAL EXPERIENCE

Area Manager | Nellis Auction — Mesa, AZ

September 2025 – Current

|

Material Handler | Nellis Auction — Mesa, AZ

January 2025 – September 2025

- Lead a team of 32 warehouse employees; responsible for daily operations, performance management, and continuous improvement across processing and returns functions.
- Scaled processing throughput from **8–10K to 15–17K items/day (+70%)** by identifying bottlenecks, holding accountability, and streamlining structured training and coaching.
- Authored project proposals and a formal business case for a new technical role — including scope definitions, ROI analysis, and stakeholder presentations.
- Partnered with executive leadership to build and maintain internal tooling, coordinating feedback loops with end users and leadership to drive adoption and improvements

KEY SOFTWARE BUILT

Processing Automation Tool (PAT)

Chrome Extension API, JavaScript, HTML •

- Custom browser extension co-developed for a Windows-dominant production environment that intercepts and validates data at point-of-entry across a multi-step workflow, eliminating 100% of listing errors across 38 daily active users.

MeetOPS Tool Suite — Warehouse Operations Tool Kit

Next.js, PostgreSQL (Neon), Vercel • <https://github.com/CameronHodges98/MeetOPS-v1>

- Multi-module internal platform replacing manual Excel tracking across three operational domains — employee performance coaching, shift planning, and cycle-time throughput analysis — built end-to-end: authored requirements, designed the schema, implemented the UI and API, and deployed to production.

EDUCATION

B.S. Software Engineering | Western Governors University

Expected September 2026

A.A.S. Computer Programming and Systems Analysis | Mesa Community College

2024 • GPA: 3.34
